Notes: 1. Rope line speeds vary under load and operating conditions (*1). 2. Travel speed is based on flat, level and firm supporting surface with no load and 12 m basic boom (*2).
The goal was to make valuable contributions in various fields around the world. To achieve this, HSC created a whole new benchmark for crawler cranes. The result is a powerful and comfortable approach to work, backed with ultra-efficient transportation and assembly potential. More eco-friendly with even cleaner operation, coupled with excellent fuel economy, safety and work efficiency. Designed with peace of mind to boost confidence, the ideal crawler crane is now available. A new generation of eco-friendly crane, the “SCX1000A-3” is designed for workites of the future. This new benchmark is set to take the world, business, and even the future, to all new highs.

Power and productivity boosts confidence.
SCX1000A-3 PERFORMANCE

Smooth and powerful. Advanced work capabilities are set to revolutionize your work site.

HSC cranes are at the forefront of their field, and are designed to create ideal working conditions to suit any work site or requirements. The SCX1000A-3 has been added to the lineup with a 10 t greater lifting capacity over the SCX900-2, as well as a host of powerful work capabilities. This drastically improves the base performance of the crane to provide true peace of mind for any type of work. There is now no reason to compromise when it comes to workability.

All-new powerful winch

The power of the new 12 t-rated line pull winch (rope φ 26 mm) has been increased by 8% to increase scope for lifting heavy loads with line-speed 45m/min, and provide better capability for simultaneous movements. Combined with a new brake* that offers better operating feel, the crane delivers simply outstanding workability.

Better lifting performance for excellent workability

The SCX1000A-3 features outstanding design characteristics, and is now more powerful and refined. Ample performance helps to increase the crane’s work radius to bring unprecedented efficiency to your work site. The powerful winch not only makes lifting easier, but also provides superior strength when lowering loads, where precise control is essential. Smooth and accurate work gives rise to safety and peace of mind.

Eco winch mode with high-speed winching and low-fuel consumption

Also included is a new Eco winch mode, which allows high line speeds under light loads without having to increase the engine speed (low rpm). This mode delivers outstanding workability in situations such as high-elevation construction sites and multiple rope hanging operations, and also limits fuel consumption and noise as engine speed can be kept at a minimum.

---

* Optional extra

A 13.5 t-rated line pull winch (rope φ 28 mm) is optionally available.
The hydraulic system uses HSC's own unique combined hydraulic circuit. By increasing and optimizing the pump pressure through the use of a mixed circuit to control the hydraulic oil from two hydraulic pumps, the sense of operability in traveling, hoisting/lowering, swing and boom hoisting can be enhanced. Even for multiplex operations, the latest hydraulic control system is able to support all tasks efficiently through priority control matching the needs. This helps to achieve a sense of operability that matches the intent of the operator.

**Combined hydraulic circuits**
The hydraulic system uses HSC’s own unique combined hydraulic circuit. By increasing and optimizing the pump pressure through the use of a mixed circuit to control the hydraulic oil from two hydraulic pumps, the sense of operability in traveling, hoisting/lowering, swing and boom hoisting can be enhanced. Even for multiplex operations, the latest hydraulic control system is able to support all tasks efficiently through priority control matching the needs. This helps to achieve a sense of operability that matches the intent of the operator.

**Control dials**
Fine speed control dials for operations such as hoisting, lowering, swinging and boom hoisting are positioned in a central location on the left side console. Operations can be adjusted at will to suit the particular job.

**Swing neutral brake**
Switches for swing free/swing brake when the control lever is in the neutral position have been installed. When the swing lever is in the neutral position, the operator may choose between free or brake depending on the work and personal preferences.

**New multiple wet-disc type brake with improved control feel**
The optional brake uses a new multiple wet-disc type that offers better control. A hanging brake pedal gives the operator smooth and precise response. Reliable braking performance is now a reality even under high loads, all while minimizing disc temperature. The system can even be used for heavy digging and foundation work that utilizes free-fall operation.

*Free-fall function is an optional extra for models equipped with the 12 t rated line pull winch. See the Spec. catalog for more details.

**Swing brake operation pedal**
A swing brake operation pedal has been employed to ensure precise swing control under strong wind situations. This maintains a high level of control when swinging the cab around, even on the harshest of work sites.
SCX1000A-3 TRANSPORTABILITY

Speedy and smart. Exceptional transportability and assembly guarantees better results.

The crane represents exceptional value when transporting it between sites. Performance has been retained while offering a design that allows efficient transportation, assembly and disassembly. This level of transportation and assembly combine to drastically improve efficiency on any work site.

2.99 m transportation width, body weight with lower boom approximately 30 t

To comply with changes in transportation requirements and more stringent regulations, the crane can be loaded on less than 3 m-wide trailers. And in addition to a crane body width that is 2.99 m, the weight of the body with lower boom has been kept approximately 30 t, which drastically improves ease of assembly after the crane has been transported to a site. This also leads to a reduction in transportation costs.

Folding gantry with hoisting cylinder

The folded gantry and main frame can be connected together, allowing the crane to be raised with the gantry in its lowest state. A hoisting cylinder has been installed as standard on the gantry itself, for quicker disassembly and assembly work.

New counter weight

A lower weight and new counter weight split into six separate pieces has been used to help reduce body weight but improve lifting performance. The lighter weight of each counter weight makes assembly easier.

Retract device

A retract device has been included as standard to change the width of the crawlers, making transportation of the crawler tracks easier. The retract pin can be pulled out from the outer side of the crane, which helps to improve safety during work.

Simple assembly crawler side frame

Comes with a folding extension beam and special link for lifting. These make the crawler side frame easier to assemble and disassemble, and improve safety.

Reduction counter weight specification

A reduction counter weight specification is available as an option to provide added flexibility for a diverse range of work sites, including high locations and in tight internal areas where operating weight is limited or restricted (with counter weight detector).

Reliable and precise lifting with advanced safety features

Improving safety should come first and foremost. A simple, easy-to-view interface has been designed to ensure that information is provided to the operator in the most reliable way possible. Various accident prevention measures and multiple redundant safety devices have also been included to provide comfort for the operator. Rest assured that your work is safe, backed with a full complement of advanced safety equipment.

1. **Moment Limiter Display**
   - A large screen display has been used offering excellent visibility and field of view of any job. A host of items can be shown, while a simple display layout ensures that information is provided to the operator properly. The display has also been designed with an interactive interface to follow any movement of the crane from a safety perspective, which helps to limit unintended operations and maintain utmost safety.

2. **ML Anti-two Block**
   - A new anti-two block using a lifting height indication device is offered as a standard equipment. When a height restriction is set in advance in the lifting height meter, the slowdown function will kick in as the restricted height is approached to prevent hook overhoist. Together with the anti-two block switch, the lifting height moment limiter provides a redundant level of safety against hook overhoist, leading to improved safety.

   Note: This function plays a supplementary role to the existing moment limiter and use of the equipment alone is prohibited by laws and regulations.

3. **Swing Limitation Area**
   - This device prevents the crane from swinging into objects and causing damage, by notifying the operator of the swinging range and automatically stopping the crane when required. The result is an added level of safety when working in tight areas.

4. **Winch Drum Lock (Front, Rear)**
5. **Individual Winch Operation Lever Locks**
6. **Three Color Percentage Indicator**
7. **Anti-two Block**
8. **Gate Lock Lever**
9. **Firewall**
10. **Emergency Engine Stop Switch**
11. **Moment Limiter Display**
12. **Engine Trouble Alarm (Yellow)**
13. **Engine Trouble Alarm (Red)**
14. **DEF/AdBlue® Gauge**
15. **Warning Icons**
16. **Aftertreatment Device Display**
17. **Engine Trouble Alarm System**
18. **Engine Trouble Alarm Mode**
19. **EXT/INT® Gauge**
20. **Warning Icon**
21. **Aftertreatment Device Display**
22. **Engine Trouble Alarm System**
23. **Engine Trouble Alarm Mode**
24. **EXT/INT® Gauge**
25. **Warning Icon**

**Designed for safe work**
An auto drum lock is installed as standard, which detects boom hoisting operations and automatically applies the lock when the lever is in the neutral position. Various warning alarms and information are conveyed to the operator to help reduce the number of careless accidents. The width of the skywalk (optional extra) has been increased to make assembly easier. All these combine to ensure work is conducted as safely as possible.
The SCX1000A-3 brings together a new cleaner running engine and advanced control system (ECO winch mode, auto idle stop function) for energy-efficient operation. One of the first models to meet EU Stage IV/U.S. Tier 4 Final exhaust gas emission regulations, the SCX1000A-3 also offers exceptional fuel efficiency and outstanding operation and control.

The highest level of clean performance. Eco-friendly to help redefine society.

The SCX1000A-3 ECOLOGY

New clean engine
The new clean engine featuring the advanced eco technology “Urea SCR System” was one of the first in the industry to meet EU Stage IV/U.S. Tier 4 Final exhaust gas emission regulations. Compared to the previous model (Stage III B/Tier 4 i), emissions of NOx (nitrogen oxides) and PM (particulate matter) have both been reduced by approximately 90%*.

In addition to the lowest level of exhaust gas emissions, lower fuel consumption also helps to cut down on CO2 emissions. The new clean engine helps to maintain the engine’s high combustion efficiency and improve fuel efficiency and power output.

* Compared with the SCX1000A-3 with previous engine (Stage III B/Tier 4 i).

The trademark of a high-quality urea aqueous solution standardized in Europe for using the Urea SCR System.

AdBlue® is a registered trademark of the German Association of the Automotive Industry.

Other fuel efficiency technology

- Minimizes excess fuel consumption during work
- Auto idle stop function
- Greater work efficiency by minimizing unnecessary movement with light load work
- ECO winch mode (refer to p. 5 for details)

What is AdBlue®?
The trademark of a high-quality urea aqueous solution standardized in Europe for using the Urea SCR System.

AdBlue® is a registered trademark of the German Association of the Automotive Industry.

Precautions with machines installed with the Urea SCR System
To ensure that the machine can be used safely and effectively, use AdBlue® aqueous solution (or a urea aqueous solution that complies with JIS or ISO standards). Using a non-standard aqueous solution or diluting the solution before use may cause mechanical problems. Malfunctions arising from the use of non-standard aqueous solutions are not covered by the HSC warranty service.

- The remaining AdBlue® level can be checked during work on the monitor display (Moment Limiter) in the cab. When the remaining level falls below the minimum level or there is an issue with quality, the machine automatically enters a low-idle state. The Urea SCR System is designed exclusively for the machine, and must not be used for any other purpose.
- Never use water or any solution that comes in contact with skin.
- Use AdBlue® in cool weather. The solution may be subjected to pressure during winter when regulations are relaxed.
- Use AdBlue® with care. When using the solution, always use sealed containers and avoid any further maintenance on the machine.
- Use a non-standard aqueous solution or diluting the solution before use may cause mechanical problems. Malfunctions arising from the use of non-standard aqueous solutions are not covered by the HSC warranty service.
- Use AdBlue® in cool weather. The solution may be subjected to pressure during winter when regulations are relaxed.

Urea SCR System
An exhaust gas aftertreatment device that injects AdBlue® (urea fluid) into the exhaust gas to break down NOx gases into harmless water and nitrogen via a chemical reaction. Treating the NOx in the exhaust helps to maintain the engine’s high-combustion efficiency and improve fuel efficiency and power output.

AdBlue® is a registered trademark of the German Association of the Automotive Industry.

Maintenance-free operation
The Urea SCR System does not include an internal ceramic filter for removing PM, as the high-efficiency combustion of the engine minimizes PM generation. Simply refliling with AdBlue® eliminates the need for any further maintenance on the exhaust system that could affect operations, for a high level of practicality with day-to-day work.

Precautions with the new clean engine
- Always use diesel for the fuel, specified lower ash oil (DH-2 <JASO>, CJ-4 <API> class) for the engine oil, and specified engine coolant. The Urea SCR System may undergo automatic regeneration (cleaning) to maintain its performance level.
- Precautions with machines installed with the Urea SCR System
- Always use diesel for the fuel, specified lower ash oil (DH-2 <JASO>, CJ-4 <API> class) for the engine oil, and specified engine coolant. The Urea SCR System may undergo automatic regeneration (cleaning) to maintain its performance level.
- To ensure that the machine can be used safely and effectively, use AdBlue® aqueous solution (or a urea aqueous solution that complies with JIS or ISO standards). Using a non-standard aqueous solution or diluting the solution before use may cause mechanical problems. Malfunctions arising from the use of non-standard aqueous solutions are not covered by the HSC warranty service.
- When the remaining AdBlue® level falls below the minimum level or there is an issue with quality, the machine automatically enters a low-idle state.
- The Urea SCR System is designed exclusively for the machine, and must not be used for any other purpose.
- Never use water or any solution that comes in contact with skin.
- Use AdBlue® in cool weather. The solution may be subjected to pressure during winter when regulations are relaxed.
- Use AdBlue® with care. When using the solution, always use sealed containers and avoid any further maintenance on the machine.
- Use a non-standard aqueous solution or diluting the solution before use may cause mechanical problems. Malfunctions arising from the use of non-standard aqueous solutions are not covered by the HSC warranty service.
- Use AdBlue® in cool weather. The solution may be subjected to pressure during winter when regulations are relaxed.

Refilling frequency Once per two refueling
The SCX1000A-3 requires AdBlue® to be refilled once every two times the machine is refueled.

(Adbue® consumption may vary slightly depending on operating conditions)

Other refilling frequency Once per two refueling
The SCX1000A-3 requires AdBlue® to be refilled once every two times the machine is refueled.

(AdBlue® consumption may vary slightly depending on operating conditions)
SCX1000A-3 COMFORT

Enhanced visibility and functionality with greater comfort.

To provide operators with greater comfort over a longer work span, HSC has designed the crane to be easy to use from the ground up. Design elements such as excellent visibility and an optimum working position help to reduce operator fatigue, while at the same time increasing comfort and functionality to ensure maximum performance, day-in, day-out.

Major improvements to operating field of view

The cab has extra-wide windows to improve visibility in all directions. Green tinted safety glass has been used all round to protect the operator from UV rays and objects that may have come free during operation. A new wiper provides a greater area of visibility when working in rain.

Highly-functional seat for optimum work position

The new seats are designed with the ideal shape for a more comfortable seating position. The wide range of seat adjustments means it suits any body shape, for the best work and a relaxing posture. A seat with suspension is available as an optional extra.

New large sliding door

A sliding door and wide platform have been implemented to reduce the amount of space required when opening and closing the door, which makes getting in and out of the cab a breeze. Four steps on the side of the crawler side frame have been used for even better access.

Optimized lever and switch layout

The pitch of the armchair levers can be optimized to improve operation with an intelligent and ergonomic switch layout.

Cross operation lever

A cross operation lever is provided for a good, easy and comfortable operation for two main operating drums, boom hoist drum and swinging. For travel motion, two armchair levers are provided behind the right-hand cross operation lever for operator comfort.

REMOTE SENSING

“REMOTE SENSING” system installed as standard

Precise monitoring of the crane’s operating condition to minimize downtime and ensure accurate maintenance. Keeping machines in the best possible operating condition helps to improve operating efficiency, while also reducing the time and cost required for maintenance.

Store data on machine conditions and operations, remote management

Real-time operation management, precise information with GPS, operating condition management can result in cost reduction.

Minimize downtime

Accurate maintenance

Better safety

REMOTE SENSING information

Precise machine information contributes to efficient operation

Share information on crane conditions

Exceptional peace of mind and convenience for worksites.
