
As the second unit, Hitachi and Sumitomo have created the New World Standard Crane of 120t class machine. Developed along the concept themes of "simple, refined and reliable", the SCX1200-2 offers new levels of safety, operability, durability and ease of maintenance.

Advanced clutchless multiple wet-disk brake is well designed, and ensures continuous heavy-duty operation.

The winch uses a multiple wet-disk brake, and a forced-oil cooling system is designed to sustain brake performance even in continuous heavy-duty operations, such as hammer grabbing. This brake system is designed to provide reliability while requiring no maintenance. Also, a newly developed mechanism is used on this brake design to reduce drag resistance and it realizes a smooth friction-off between discs while a high-viscosity hydraulic oil is used as standard, contributing to longer lift of hydraulic pumps and motors.

Powerful winch drum with bigger line pull.
The SCX1200-2 is really a versatile machine, and certainly performs not only liftcrane/lufting towercrane works but also duty cycle works under clamshell, hammer grab and dragline applications with bigger line pull of 196kN (<20t) as maximum with 26 mm dia. cable. In addition, by employing a specially-tailored power increase control, the engine always maximizes its output under any load condition in whole range of engine rpm.

Optional third drum.
A third drum is optionally available under the same specifications as that of two main operating drums, and it accordingly enables to efficiently perform heavy duty works under an 196kN (<20t) line pull.

New negative brake system much reduces operator fatigue and enhances safety.

With a new negative brake of spring-applied/power hydraulically-released type applying dynamic hydraulic pressure for its release control, an effective braking can be done under an extreme light foot pedaling, and it accordingly results in greatly reducing operator fatigue, especially during winch free-fall operation under duty cycle applications. Further, the use of negative brake system maintains a high level of brake safety even if a hydraulic pressure drop in the circuit happens.

An aluminum-make oil cooler.
For not only corrosion resistance but also high cooling efficiency, an aluminum-make oil cooler is provided in front of engine radiator.

As the second unit, Hitachi and Sumitomo have created the New World Standard Crane of 120t class machine. Developed along the concept themes of “simple, refined and reliable”, the SCX1200-2 offers new levels of safety, operability, durability and ease of maintenance.

Advanced clutchless multiple wet-disk brake is well designed, and ensures continuous heavy-duty operation.

The winch uses a multiple wet-disk brake, and a forced-oil cooling system is designed to sustain brake performance even in continuous heavy-duty operations, such as hammer grabing. This brake system is designed to provide reliability while requiring no maintenance. Also, a newly developed mechanism is used on this brake design to reduce drag resistance and it realizes a smooth friction of friction between discs while a high-viscosity hydraulic oil is used as standard, contributing to longer lift of hydraulic pumps and motors.

An aluminum-make oil cooler.

For not only corrosion resistance but also high cooling efficiency, an aluminum-make oil cooler is provided in front of engine radiator.
Job-Proven Controllability
and Operator Comfort

The New World Standard

Cab large sliding door with a swing-link design.
For easy entry and exit to and from the cab, and smooth door opening and closing, a swing-link type large sliding door is well designed. And, a swing-link door design certainly eliminates a troublesome occurrence like a gathering the mud into rail groove, rail-rust and so on unlike rail-slide door.

Slidable control station and operator seat.
To set most of suitable operator position, both right- and left-hand control stations are designed to simultaneously slide 60 mm back and forth together with operator seat, and operator seat is able to slide 80 mm independently too.

Optional air-conditioner of outside-airintake type.
For good air-conditioning with fresh air, an outside-airintake type air-conditioner is optionally available.

A good swing & boom hoisting/lowering speed control design.
Boom hoist drum rotation speed can be freely controlled thru knob dialing independently for more precise combined operation of hook and boom motions. In addition, max. swing speed can be freely controlled thru knob dialing too, and, as an example, it realizes a precise combined operation under higher hook hoisting and lower swing speed in high lift work. Further, more smoother swing can be realized in any kinds operations and works too because, as a main reason, a variable displacement axial piston pump is designed in swing circuit.

A high operation ease with specially-tailored EPC system.
Thanks to unique EPC system, an easy-precise-minute control of engine rpm and pump discharge from min. thru max. is really possible at the same time by simply padaling the foot throttle which links "EPC" controller electrically.

Universal joystick control station.
An universal joystick control station is provided for a good, easy and comfortable operation for two main operating drums, boom hoist drum and swing. For travel motion, two armchair control levers are provided behind right-hand universal joystick control lever for operator comfort.

Simplified and easy-to-read panel.
A large LCD graphic dispaly panel of Load Moment Indicator is provided with a reflection-less design on display panel. And, the switches, meters/gauges and controllers are functionally grouped for operator control convenience.
Job-Proven Controllability and Operator Comfort

A newly designed operator’s cab.
In consideration of operator comfort, a new operator’s cab much improves the visibility thru front and both side windows of the cab with simplified layout of control station with two universal joystick control levers. In addition, a reinforced light green-tinted safety glass is adopted in front window to protect operator from ultraviolet rays and airborne debris.
Pays a keen attention to safety, transport and environment too.

Safety

Newly-designed Load Moment Indicator. An easy-to-read LCD graphic display panel is well designed and a reflection-less display panel is provided on a new Load Moment Indicator (LMI) with setting ease of viewing angle. In addition, no zero-point adjustment, and data input thru interface counter-indication/message on display panel are available for easier and certain setting of operating conditions and LMI functions. Of course, "present lifting load", "rated load", "load ratio", "working radius", "boom angle", "engine rpm" and so on are indicated on the LMI display panel. Further, displayed picture and menu selection can be easily set up by panel switch in accordance with operation situation and condition.

LMI automatically sets front-end att. erection mode with letter message. In the range out of crane working area, the LMI display panel automatically indicates "Now, out of crane working range" with a rigging instruction, and it is available to lift front-end att. off ground without the influence of M/L safety functions, and, after front-end att. is lifted over the range of crane working area, LMI safety function gets back automatically for safe erection work.

Boom speed slowdown function. This function is available just before automatic stopping at both upper and lower side limits of boom angle to prevent a shock even though control lever is still at hoisting/lowering position. This function is also available when over-loading.

Optional lifting height indication function. For more safe lifting work, especially in blind condition, it is optionally available to indicate the lifting height above ground or depth below ground on display panel of LMI.

Automatic drum pawl locking device. On boom hoist drum, it is designed to automatically lock and release drum pawl when control lever just returns to neutral position, and just actuates.

Swing/travel alarms. These alarms alert work crew around the machine when swinging and/or traveling to keep clear for safety.

Automatic drum pawl locking device.

The engine meets current EU Emission Regulations for Off-Road Diesel Engine-Stage 3, and Japanese Emission Standard for Diesel Construction Equipment-Stage 3, and the SCX1200-2 clears low noise levels as defined by Ministry of Land, Infrastructure and Transport of Japan under the new noise measuring methods regulated by ISO.

SCX1200-2
Newly-designed Load Moment Indicator.
An easy-to-read LCD graphic display panel is well designed and a reflection-less display panel is provided on a new Load Moment Indicator (LMI) with setting ease of viewing angle. In addition, no zero-point adjustment, and data input thru interface counter-indication/message on display panel are available for easier and certain setting of operating conditions and LMI functions.

Of course, "present lifting load", "rated load", "load ratio", "working radius", "boom angle", "engine rpm" and so on are indicated on the LMI display panel. Further, displayed picture and menu selection can be easily set up by panel switch in accordance with operation situation and condition.

LMI automatically sets front-end att. erection mode with letter message. In the range out of crane working area, the LMI display panel automatically indicates "Now, out of crane working range" with a rigging instruction, and it is available to lift front-end att. of ground without the influence of M/L safety functions, and, after front-end att. is lifted over the range of crane working area, LMI safety function gets back automatically for safe erection work.

Counterweight with horizontally-spit design.
It is able to load boom extension(s) onto counterweight when transport. And, the reversible stack is possible to reduce the time for disassembling/assembling works.

An assembling ease of crawler side frames.
Thanks to "hook-on design" with hydraulic removal jointpins, crawler side frames can be easily assembled and disassembled on and from carbody frame, and it accordingly result in a time saving task.

Environment
The engine meets current EU Emission Regulations for Off-Road Diesel Engine-Stage 3, and Japanese Emission Standard for Diesel Construction Equipment-Stage 3, and the SCX1200-2 clears low noise levels as defined by Ministry of Land, Infrastructure and Transport of Japan under the new noise measuring methods regulated by ISO.

Notes:
1. These figures are based on drum first layer and rated engine rpm with no load, and vary under load and operating conditions (*1).
2. This figure is applicable to tower jib hoisting (*2).
3. Travel speed is based on flat, level and firm supporting surface, and under the conditions that no load must be applied and front-end att. must be 12.0m basic boom (*3).
