Note: • All "t" implies metric tons in this catalog.

• Specifications conform to the Safety Regulations for Cranes and Mobile Cranes in Japan.

CRAWLER CRANE

■Dimensions

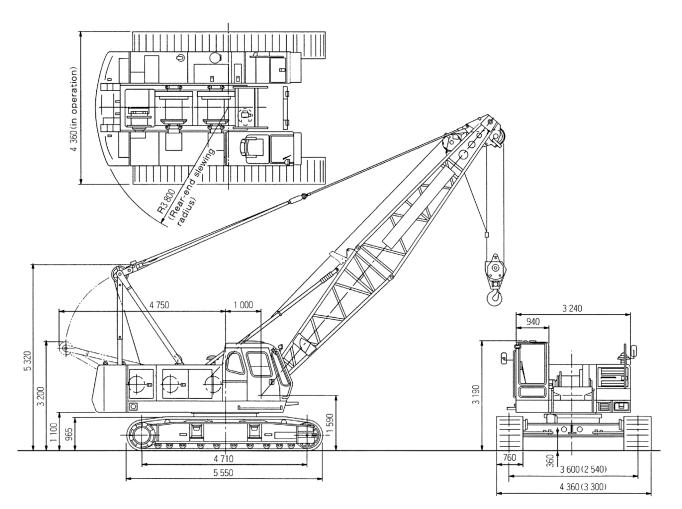

Figure in () shows dimension when side frames are retracted for trailer transport

Specification	າຣ		(1 t = 1 000 kg)
Maximum rated Lo	oad $ imes$ Working radius	t × m	55×3.7
Basic boom lengtl	h	m	10
Maximum boom le	ength	m	52
Fly jib length			6 to 15
Boom + fly jib leng	gth		43+15
Winch			
Line speeds	Front main drum	m/min	*110/74/37
	Rear main drum	m/min	*110/74/37
	Boom hoist drum	m/min	*60
Slewing speed		min ⁻¹ (rpm)	3.7 (3.7)
Travel speed		km/h	2.0/1.5
Gradeability		% (°)	40 (22)
Diesel engine			Isuzu 4HK1X
Rated horsep	ower	kW/min ⁻¹ (PS/rpm)	147/2 100 (200/2 100)
Ground contact pr	ressure	kPa(kgf/cm ²)	67.0 (0.68)
Operating weight		t	52.5 (including 10 m boom and 55 t capacity hook)

Notes: 1. Data is expressed in SI units followed by conventional units in (). 2. *Line speeds will vary with the load.

📕 Engine

Model	Isuzu 4HK1X
Туре	Water-cooled, 4-cycle, 4-cylinder,
	direct fuel injection type diesel engine
Rated horsepower	147 kW (200 PS) at 2 100 min ⁻¹
	(2 100 rpm)
Maximum torque	688 N⋅m (70 kgf⋅m) at 1 500 min ⁻¹
	(1 500 rpm)
Piston displacement	5.19 L
Fuel tank capacity	300 L
Electric system	DC 24 V

Notes:

- 1. The engine meets Stage/Tier 3 of current smoke emission regulations in Europe, America and Japan.
- 2. A 147 kW engine horsepower shown above is defined under a current international engine horsepower indication formula which includes necessary horsepower for engine alternator drive but excludes engine fan drive.

Main and Auxiliary Hoist Mechanism

- •The SCX550 is equipped with dual hoist mechanisms, each consisting of independent front and rear drums driven by a hydraulic motor.
- Hoisting and lowering the load is achieved by forward/reverse rotation of the hydraulic motor.
- •Power lowering is carried out with a hydraulic brake.
- •Hoisting and lowering can be carried out at three speeds-fast, medium and slow-to suit job requirements.
- •Each drum is fitted with a friction band-type brake. This allows free fall (rapid lowering) of the hook.
- •Front and rear drums are each fitted with a pawl-type drum lock to positively hold the load in the air.
- •The drum brake is an external contracting friction band-type using durable non-asbestos lining.
- •The brake is controlled by the hydraulic servo system to reduce control force. With the hoist lever in neutral, auto braking or foot braking can be selected.

Boom Hoist Mechanism

- •Independent operation separated from other functions.
- Boom hoisting/lowering is done by forward/reverse rotation of a hydraulic motor. Boom lowering is made by power lowering through a hydraulic brake.
- Both hydraulic brake and spring-set/hydraulic-released multiplate disc type brake offer positive stopping of the boom.
 When the boom is hoisted or lowered, brakes are automatically released.
- •Boom hoist drum is fitted with a pawl-type drum lock.

Slewing Mechanism

- •Independent operation separated from other functions.
- •Driven by the hydraulic motor through reduction gear. Slewing speeds are freely controllable from zero to maximum speed with a single lever.

Slewing Brake

The disc-type slewing brake can be hydraulically applied by the brake switch on the slewing lever.

Slewing Lock

Manual mechanical-lock with a rod tip engaged in the holder of the track frame for transportation.

Slewing Circle

Single-row shear-type ball bearing with heat-treated internal gear.

A Revolving Frame

All welded steel construction, stress-relieved, precision-machined for rigidity and strength.

A-frame

Lowerable for transportation.

Counterweight

Total weight		18 700 kg
Consisting of 3 sections :	One	3 600 kg
	One	7 100 kg
	One	8 000 kg

🔊 Boom

Tubular Chord Crane Boom

1 300 mm wide by 1 300 mm deep at connection, lattice construction using high-tensile steel tubular chords

Basic boom	Total length 10.0 m, 2-piece construction; upper section 5.0 m and lower section 5.0 m
Boom point	Offset boom point, 5 sheaves (462 mm PCD) mounted on anti-friction bearings on boom top
Boom extensions	.3.0 m, 6.0 m and 9.0 m long available
Connection type	.Pin-connected
Boom backstop	Dual-rail, telescopic tubular construction with spring damper
Boom hoist bridle	Serves as connection between pendants and boom hoist wire rope reeving, equipped with 6 sheaves (340 mm PCD) for 12-part boom hoist wire rope reeving

Fly Jib

550 mm wide by 480 mm deep at connection, lattice construction using high-tensile steel tubular chords.

Jib length	.Total length 6.0 m, 2-piece construction;
	upper section 3.0 m and lower section 3.0 m
Jib point	.1 sheave (462 mm PCD) mounted on
	anti-friction bearings on jib top
Jib extension	.3.0 m long available
Connection type	.Pin-connected
Short jib	Optional. Attachable to the main boom top
-	to hoist the light load quickly with a single
	rope
	lebe

Note: Boom extension, fly jib, or short jib can be attached to the basic boom when needed. However, both fly jib and short jib cannot be attached simultaneously to the boom.

Tubular Chord Tower Crane Boom

1 300 mm wide by 1 300 mm deep at connection, lattice construction using high-tensile steel tubular chords

Tower boom length...22.0 m minimum

	40.0 m maximum
Tower extensions	1.5 m, 3.0 m, 6.0 m and 9.0 m tower extensions are in
	common with crane boom extensions
Connection type	Pin-connected
Tower backstop	.Dual-rail, telescopic tubular construction with spring damper.
Tower hoist bridle	Serves as connection between tower boom pendants and tower boom hoist wire rope reeving, equipped with 6 sheaves (340 mm PCD) for 12-part tower hoist wire rope reeving.

Tower Jib

940 mm wide by 750 mm deep at connection, lattice construction using high-tensile steel tubular chords

.16.0 m to 28.0 m
.3.0 m and 6.0 m long available
.Pin-connected
.Serves as connection between tower jib
pendants and tower jib hoist wire rope
reeving, equipped with 4 sheaves (360 mm
PCD \times 3 & 420 mm PCD \times 1) for 8-part
tower jib hoist wire rope reeving.

Operator's Cab

All-weather, well-ventilated, roomy operator's cab with good visibility. The independent cab is insulated against noise and vibration.

Hydraulic System

- •3 variable displacement piston pumps allow both independent and combined operations of all functions.
- •Variable displacement piston pumps control working speeds, and make effective use of engine horsepower.

	Pump-1	Pump-2	
Type of pump	Variable displacement		
Pressure setting	29.4 MPa	29.4 MPa	
	(300 kgf/cm ²)	(300 kgf/cm ²)	
Max. Oil flow *	222 L/min	222 L/min	

	Pump-3	Pump-4
Type of pump	Variable displacement	Gear
Pressure setting	23.0 MPa (235 kgf/cm ²)	4.9 MPa (50 kgf/cm ²)
Max. Oil flow *	130 L/min	32 L/min

* with non-loaded condition

Main and Auxiliary Hoist Motors

Axial piston motors with counterbalance valves

Boom Hoist Motor

Axial piston motor with counterbalance valve

Axial piston motor

Slewing Motor

Travel Motors

Axial piston motors with brake valve and spring-set/hydraulic-released multiplate disc brake

Relief and Brake Valves

- •Each hydraulic circuit incorporates large-capacity relief valves to protect circuit from overload and shock load.
- Counterbalance valves, provided for hoist motor, compensate load lowering and prevent accidental load drop if hydraulic power is suddenly reduced.
- •Brake valves (consisting of relief valve and counterbalance valve) are provided for travel circuit.

Pressure Settings

Main Circuit

 Main relief valves 	
Hoist (front and rear)	29.4 MPa (300 kgf/cm ²) 23.0 MPa (235 kgf/cm ²)
Slewing	
Overload relief valves	
Hoist (front and rear) circuits	
Boom hoist circuit	31.4 MPa (320 kgf/cm ²) 30.4 MPa (310 kgf/cm ²) 29.4 MPa (300 kgf/cm ²)
Travel circuit	
Pilot Circuit	
Main relief valve	4.9 MPa (50 kgf/cm ²)

Line Filters

High-filtration 10 μ m full-flow filter element is incorporated in the return line. Pilot filter and suction filter are provided in each circuit.

Traction mechanism

- Each track is driven by an axial piston motor through reduction gear. This mechanism allows counter-rotation of tracks for maneuverability in close guarters.
- •When the lever is in neutral position, both hydraulic brake and spring-set/hydraulic-released multiplate disc brake are automatically applied for stopping.

Track Frame

All-welded, stress-relieved, box-section construction.

Side Frames

Side frames of all-welded construction can be retracted for transportation.

Side-flame retract unit

- •Side frame are extended and retracted with a hydraulic cylinder located inside the track frame. Hydraulic power source for the hydraulic cylinder is separated from other systems to allow combined operation of travel and side frame.
- •The side frames are extended and retracted quickly without need for piping

Track Shoes

Heat-treated alloy steel castings with induction-hardened roller path and driving lugs.

No. of upper rollers (each side)	2
No. of lower rollers (each side)	
No. of track shoes (each side)	
Shoe width	

Boom, Main and Auxiliary Hoist, Slewing and Travel

Remote controlled hydraulic servo. Working speed can be precisely controlled according to lever stroke.

Accelerator Grip

Engine power can be controlled according to job needs by electric finger-touch grip atop the slewing lever, accelerator lever and engine foot throttle.

Monitor Displaying Machine Conditions

With the monitor, the operator can check, at a glance, engine oil pressure, water temperature and fuel level, as well as levels of hydraulic oil, engine oil and coolant. The red light turns on and the buzzer sounds in the event of an abnormality.

SAFETY DEVICE

Boom Angle Indicator

Mechanical-type boom angle indicator is provided at boom foot.

Counterbalance Valves (Brake Valves)

Counterbalance valves are each incorporated in travel motors, boom hoist motor, and main and auxiliary hoist motors. If the hydraulic line is broken, this valve is automatically actuated to prevent motor rotation.

Spring-Set/Hydraulic-Released Multiplate Disc Type Travel Brakes

Slewing Lock and Slewing Parking Brake

Drum Locks (Electric Type)

A pawl-type drum locks, provided at front drum, rear drum and boom drum, are automatically applied when the engine key is set to OFF or ACC position.

Independent Lever Locks

Main and auxiliary hoist levers, boom hoist lever, and travel levers are each fitted with lock mechanisms to prevent mishandling.

Devices for Crane Operation

Moment Limiter

Reliable safety is ensured by large screen display and interactive interface design.

Main Hook Over-Hoisting Limiter

When the hook reaches its hoist limit, the bell sounds and the auto-stop automatically actuates at the same time.

Boom Over-Hoisting Limiter

When the boom reaches its angle limit, the buzzer alarm sounds and boom hoisting automatically stops at the same time. The telescopic-type boom backstop is also provided.

•Secondary Boom Over-Hoisting Limiter

In addition to the main-hook over hoisting limiter and boom over hoisting limiter, the secondary boom over hoisting limiter is provided. It actuates at a boom angle of 82° to avoid overhoisting of both the boom and/or hook.

•Lock lever (Fool Proof Shut-off Lever)

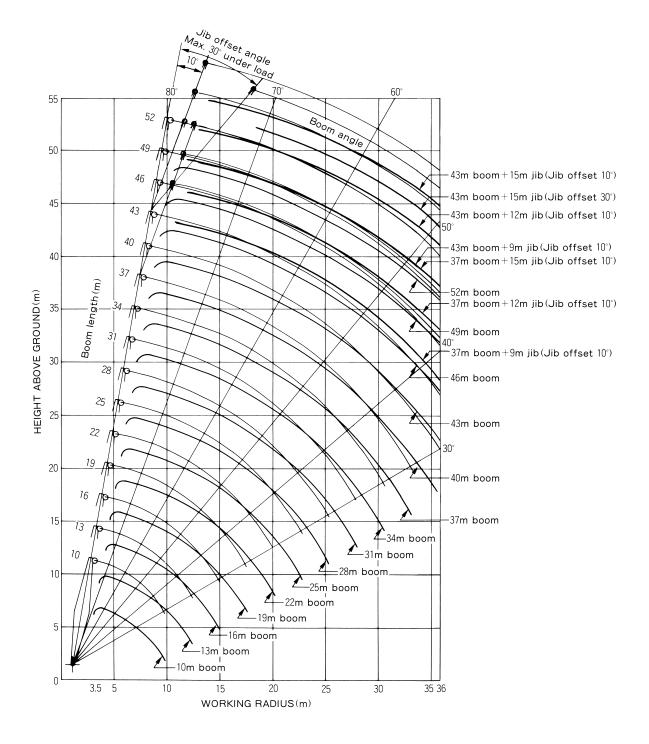

The lock lever (fool proof shut-off lever) shuts out the hydraulic pilot pressure to pilot control valves. With the pilot control shut-off lever in the LOCK position, the machine will not operate even if the lever is accidentally shifted.

•Faile Safe mechanism

The related movements stop automatically if an electric wire is broken.

34.0										33.2×2.15	1.95	1.85	1.75	1.60	1.50
36.0											35.8×1.75	1.60	1.50	1.35	1.25

Notes: 1. The rated loads shown do not exceed 78% of tipping load with the machine on firm level ground, and are not less than 1.15 times over-front stability stipulated by the mobile crane construction standards.

The calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as main hook, from figures shown above.
 Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
 When the fly jib or the short jib is attached to the load to be actuarially lifted is the rated load minus the weight lifted below and the weight of the main and auxiliary hooks. Be careful that if the calculated load is less than 0.8 t, no crane operation is allowed.

Jib length (m)	6	9	12	15	Short Jib
Weight to be reduced (t)	0.75	0.90	1.05	1.20	0.30

5. The counterweight is 18.7 t.

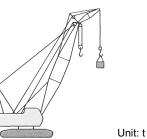

6. Be sure to fully extend the side frames before operating the machine.

7. Correlations between the number of hoist rope reevings, maximum rated loads, hook weights are shown in the table below.

Hook	Hook				Max	kimum rated loa	id (t)			
capacity	weight	9 Rope	8 Rope	7 Rope	6 Rope	5 Rope	4 Rope	3 Rope	2 Rope	1 Rope*
(t)	(t)	reevings	reevings	reevings	reevings	reevings	reevings	reevings	reevings	reeving
50	0.70	55.0	52.0	45.5	39.0	32.5	26.0	19.5	13.0	—
30	0.36					30.0	26.0	19.5	13.0	—
15	0.32							15.0	13.0	_
6.5	0.18									6.5

* The boom length should be at least 13 m when operating the machine with a single suspension line.

8. Figures described as OO×OO in the tables indicate working radius (m) × rated load (t).

Notes: 1. The rated loads shown do not exceed 78% of tipping load with the machine on firm level ground, and are not less than 1.15 times over-front stability stipulated by the mobile crane construction standards.

2. To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as main hook, from figures shown above. Hook capacity (t) Weight (t)

HOOK Capacity (I)	weight (t)
55	0.70
30	0.36
15	0.32
6.5	0.18

3. Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.

4. Jib offset angle to main boom is set to loading condition.

5. The counterweight is 18.7 t.

6. Be sure to fully extend the side frames before operating the machine.

7. Figures described as $OO \times OO$ in the tables indicate working radius (m) × rated load (t).

Available fly jib	Jib length 6 m to 15 m																													
Available short jib			ł																						<u> </u>					

Boom inserts combination:

I : For operation of crane boom only II : For operation of crane boom with fly jib

6 m boom extension can be replaced with two 3 m boom extensions, and 9 m boom extension with a combination of 3 m and 6 m boom extensions.

Note: When purchasing a 22 m boom, the boom cannot be transformed to 16 m in case of type II boom extensions. In this case, an additional 3 m boom extension is required.

28.0				27.6×2.30			26.9×2.50	2.20				
30.0								2.00				
30.3								2.00				

Unit: t

Notes: 1. The rated loads shown do not exceed 78% of tipping load with the machine on firm level ground, and are not less than 1.15 times over-front stability stipulated by mobile crane construction standards.

2. The load to be actually lifted will be the rated load shown minus the weight of all lifting attachments such as a hook.

15 ton hookweight 0.32 t

3. Working radius is a horizontal distance between slewing center of the machine and center of gravity of the load lifted.

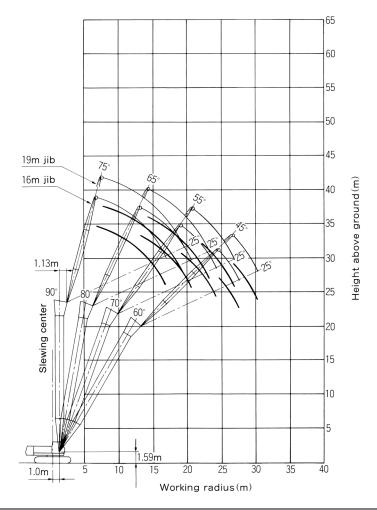

4. Counterweight is 18.7 t.

5. In operation with 1-rope reeving, use a 6.5 t hook (option). In this case, the rated loads for tower crane (with 1-rope reeving) described in the Operation Manual will be applied.

6. Crawlers must be extended into position before crane operation.

7. Figures described as $\bigcirc \bigcirc \lor \bigcirc \bigcirc$ in the tables indicate working radius (m) × rated load (t).

Working Ranges

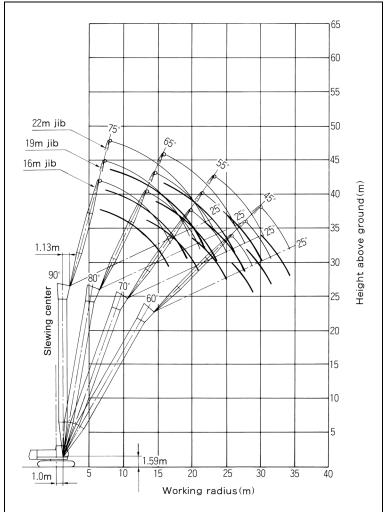

Working ranges are shown for unloading.

Rated load	t	6.00	6.00	6.00	6.00	6.00	6.00	6.00	6.00	6.00	6.00	6.00	6.00	5.8	6.00	6.00	6.00
Bucket dumping height 0.8 m ³ bucket	m	2.0	3.3	4.5	5.4	3.7	5.5	7.0	8.1	5.4	7.6	9.4	10.8	7.1	9.7	11.9	13.6
1.0 m ³ bucket	m	1.8	3.1	4.3	5.2	3.5	5.3	6.8	7.9	5.2	7.4	9.2	10.6	6.6	9.5	11.7	13.4
1.2 m ³ bucket	m	1.6	2.9	4.1	5.0	3.3	5.1	6.6	7.7	5.0	7.2	9.0	10.4	6.7	9.3	11.5	13.2

Notes: 1. Rated loads for clamshell do not exceed 90% those for crane.

2. The rated loads shown are upper limits determined by the following equation. Please select a bucket in such a manner that its rated load does not exceed the rated load shown below, according to kinds of the loads handled.

Rated load = Bucket capacity (m³) × Specific gravity of load (t/m³)+Bucket weight (t)

Be careful that brake will be overheated if the bucket is too heavy even within the rated loads.

3. Working radius is the horizontal distance from the slewing center to the center of gravity of lifted load.

4. The bucket weight is 3.1 t. (Max)

5. The counterweight is 18.7 t.

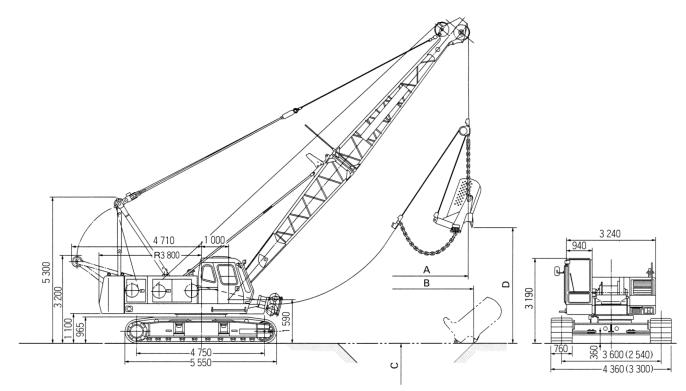

6. Be sure to fully extend the side frames before operating the machine.

7. Free fall using brake will vary with operating conditions such as bucket weight and work cycle, but its height should be within 10 m.

DRAGLINE

■Dimensions

Unit: mm

Dimensions shown in () are with tracks retracted.

Specifications

_epeellieutiene			
Bucket capacity	m ³	1.15/1.7	
Max. bare line pull (1st drum	layer) t	15.6	
Boom length	m	13 to 22	
Suspend line speeds	m/min	*74/37	Rope 22 mm dia.
Drag line speeds	m/min	*74/37	Rope 22 mm dia.
Boom hoist/lower line speed	m/min	*60	Rope 16 mm dia.
Travel speeds	km/h	2.0/1.5	
Slewing speeds	min ⁻¹ (rpm)	3.7 (3.7)	
Ground contact pressure	kPa (kgf/cm ²)	73.2 (0.74	·)
Operating weight	t	53.5 (13 m boom + 1.1	15 m ³ bucket)

Dragline Bucket (Reference data)

Capacity (m ³)	Weight (t)	Use
1.15	1.28	Heavy duty
1.7	1.68	Medium service

Notes: 1. Data is expressed in SI units, followed by conventional units in ().

2. Other specifications, not shown, are similar to those for the crane.

3. *Line speeds will vary with the load.

Working Ranges

Boom length	m		13			16			19			22	
Boom angle	degree	30	40	50	30	40	50	30	40	50	30	40	50
A Working radius	m	12.8	11.5	9.9	15.4	13.8	11.9	18.0	16.1	13.8	20.6	18.4	15.7
Rated load	t	8.72	9.66	10.82	7.31	8.27	9.41	5.50	6.74	8.21	4.76	5.64	6.95
B Max. digging reach	m	16.3	15.9	15.0	19.6	19.1	18.0	22.9	22.2	21.0	26.2	25.4	23.9

D Boom point height	m	7.8	9.7	11.3	9.3	11.3	13.6	10.8	13.5	15.9	12.3	15.5	18.2

Notes: 1. The size of the bucket has to be determined according to local condition.

2. The rated loads shown are upper limits determined by the following equation. Please select a bucket in such a manner that its rated load does not exceed the rated load shown above, according to kinds of the loads handled.

Rated load = Bucket capacity (m³) × Specific gravity of load (t/m³) + Bucket weight (t) Be careful that brake will be overheated if the bucket is too heavy even within the rated loads.

3. Working radius is the horizontal distance from the slewing center to the center of gravity of lifted load.

4. Maximum digging reach/depth may vary considerable depending on digging condition and the skill of the operator.

5. The counterweight is 18.7 t.

6. Be sure to fully extend the side frames before operating the machine.

TECHNICAL DATA

BASIC MACHINE

Undercarriage	
760mm wide crawler shoes	Side frame retract unit (1 pc)
Crawler side step	
Superstructure	
Working lights (2 pcs)	Superstructure under-cover
 Rear view mirrors (left and right) 	Cab side steps
 Drum mirror (boom hoist drum) 	Speed controller
 Centralized lubrication system 	Drum rotation sensor
(for A-frame and slewing circle)	 18.7 t counterweight
Re-fuel pump	Spare parts
 Drum rotation speed controller(for boom hoisting and slew mechanism) 	A-frame (w/step)
Cab	
Dual intermittent window shield wipers with washer available on both	AM/FM radio with clock
front and roof windows	
Sunshade	Cigar lighter
Sunvisor	Ashtray
Cab floor mat	Accelerator grip
	Engine foot throttle
Room light Ruilt in two air conditioner	Electric tilt-type lever stand
Built in type air conditioner	
Safety Devices	
Slew lock	Engine start interlock system
Drum pawl lock	 Lock lever (Fool proof shut-off lever)
(front and rear, and boom hoist)	Before-work check monitor
Slewing alarm	Speed slowdown device
 Non drum brake preventing device 	Free fall interlocking
Slewing brake	Fail safe mechanism
ů –	Independent lever lock
FRONT ATTACHMENTS	
Crane	
 10 m basic boom (base section 5 m, top section 5 m) 	 Boom hoist cable (φ16 mm × 135 m)
Boom stop	Moment Limiter
Boom angle indicator	Over hoisting limiter
 Main hoist cable ((main hook, boom hoist, secondary)
	• 55 t hook
Full-Luffing Tower Crane	
40 m tower boom	• Tower jib hoist cable (22 mm × 145 m)
(base section: 5 m, 1.5 m \times 2, 3 m \times 1, 6 m \times 3, 9 m \times 1, top section: 2 m)	• Tower hoist cable (ϕ 16 mm × 150 m)
(Up to 25 m tower jib is available to maximum 40 m tower.)	Load moment indicator
• 28 m tower jib (base section: 5 m, 3 m \times 2, 6 m \times 2, top section: 5 m)	Over hoisting limiter
Tower stop	(hook, tower, tower jib and secondary)
• 15 t hook	Tower boom angle indicator
• Main hoist cable (ϕ 22 mm × 215 m)	Blocks for assembling 31 m or higher tower
Clamshell	
 10 m basic boom (base section 5 m, top section 5 m) 	• Suspend cable (ϕ 22 mm × 60 m)*
Boom stop	• Hydraulic tagline (with ϕ 10 mm × 45 m cable)
Boom angle indicator	 Boom hoist cable (\u00f616 mm × 135 m)
Open/close and suspend cable disengagement limiter	* Onen/alass and even and eables are determined by the state of the st
(for tubular chord boom)	* Open/close and suspend cables are determined based on 19 m boom
 Open/close cable (\u00f622 mm × 67 m)* 	length and 12 m digging depth.
Lifting Magnet	
• 13 m angle chord boom [base section 6.5 m, top section 6.5 m	• Boom hoist cable (\u00e916 mm × 150 m)
wide-angle sheave (with 2 boom-point sheaves)]	Hoist cable disengagement limiter (for angle chord boom)
Boom stop	• Hydraulic tagline (with ϕ 10 mm × 45 m)
Boom angle indicator	Load moment indicator
• Hoist cable (ϕ 22 mm × 185 m)	Over hoisting limiter (hook, boom hoist, secondary)
