# SCX800HD. 2 

HYDRAULIC CRAWLER CRANE

# Specifications 

EN R@ting

## Superstructure

## SCX800HD. 2

## UPPER REVOLVING FRAME:

All-welded, precision machined, robust construction. A machined surface provided for mounting load hoist, opt. 3rd drum and boom hoist assemblies, and mounting itself on turntable bearing.

## TURNTABLE BEARING WITH INTERNAL SLEWING GEAR:

Single shear ball type; inner race of turntable bearing with integral, internal slewing (ring) gear bolted to lower frame, and outer race of turntable bearing bolted to upper revolving frame.

## CONTROL SYSTEM:

System contains one set each of quadruplicate and triplicate tandem valves which direct oil to various machine function and are actuated by control levers via remote controlled hydraulic servo for all motions. Working speeds can be precisely controlled by pilot-operated universal joystick and armchair single axis control levers in cooperation with "EPC" controller that varies engine rpm and hyd. pump discharge simultaneously thru engine foot throttle control, or varies just hyd. pump discharge while keeping engine rpm via pump discharge dial control. System also takes a specially-tailored unique hydraulic circuits to maximizes drum horsepower, and reduces horsepower loss with eliminating the possibility of engine stall.
Pump control system - By "EPC" controller that provides two modes of engine-pump control. MODE I:
The "EPC" controller is normally programmed to vary the engine speed and pump discharge simultaneously. Simply pedaling the foot throttle advances the engine to maximum speed and the hydraulic pumps to maximum flow at the same time. This mode is suitable to precision crane work.

## MODE II:

By activating a pump discharge control dial, it is able to vary just the pump discharge while keeping engine speed fixed by setting switch located at instrument panel. Mode II is convenient for duty cycle works such as clamshell operation, where the engine is normally run at full throttle.
A specially-tailored pressure compensating valve Utilized in hydraulic circuits to realize a good minute operation of two main, and boom hoist drums. displacement axial piston pumps for both independent and combined operations of all functions, and one fixed displacement duplicate tandem gear pump for system valve and cylinder controls.

Main/aux. crane hoist motors - Variable displacement axial piston motor with counterbalance valve.
Boom hoist motor - Fixed displacement axial piston motor with counterbalance valve and springapplied/power hydraulically released multiple wet-disc type automatic brake.
Third drum motor - Optional extra; variable displacement axial piston motor with counterbalance valve.
Slewing motor - Fixed displacement axial piston motor with spring-applied/power hydraulically released multiple wet-disc type brake.
Travel motors - Shoe-in design; variable displacement axial piston motor with brake valve and spring-applied/power hydraulically released multiple wet-disc type automatic brake.
Oil cooler - Aluminum-make; available for not only a good rustproof but also high cooling efficiency.
Hydraulic oil reservoir - 450 liters capacity.

## LOAD HOIST ASSEMBLY:

Front and rear main operating drums driven by independent hydraulic motor of bidirectional, variable displacement axial piston motor through a 2 -stage planetary reduction gear unit powering the rope drum in either direction for hoisting and lowering load. Reduction gear unit installed within drum inside together with multiple wet-disc brake unit. Drum each sized in same dimension.
Brakes - Multiple wet-disc unit with negative brake design that takes the function of "springapplied, power hydraulically released", and maintains a high brake safety even if a hydraulic pressure drop in the circuit happens; installed within drum inside together with shaft-coupled reduction gear unit. Eliminate clutch, and almost require no brake maintenance on this brake design.
Brake control - Applies dynamic hydraulic pressure for brake release operation with an extreme light pedaling force.
Brake mode - Available in two modes; one is automatic as suitable for liftcrane operation, and the other is free-fall mode as suitable for bucket operation. Free-fall interlocking is also designed for fail-safe operation.
A forced-oil cooling system - Available in both front and rear drum brake units to keep brake performance even in continuous heavy-duty operations.
Drums - One piece, parallel grooved lagging with locking ratchet wheel cast integral; bolted to reduction gear unit. Available to wind up approx. 36 m long cable of 26 mm dia. at drum 1st layer.
Drum locks - Electrically operated pawl.
Drum rollers - Optional extra; available for right cable winding onto drums.

## BOOM HOIST ASSEMBLY:

Driven by bi-directional, axial piston hydraulic motor through 3 -stage planetary reduction gear unit powering the rope drum in either direction for hoisting and lowering boom.

Brake - Spring-applied, power hydraulically released multiple wet-disc type automatic brake.
Drum rotation speed controller - Max. rotation speed can be tuned according to arbitrary value that is electrically controlled by dialing, and then varies pump discharge.
Drum - One piece, parallel grooved lagging with locking ratchet wheel cast integral; bolted to reduction gear unit.
Drum lock - Power hydraulically operated pawl with automatic locking device.

## THIRD HOISTING MECHANISM:

Optional extra;
Brake - Multiple wet-disc unit with negative brake design as same as that of front/rear main operating winches.
Brake control - Applies dynamic hydraulic pressure for brake release operation as same as that of front/rear main operating winches.
Brake mode - Available in two modes of automatic and free-fall as same as that of front/rear main operating winches. Free-fall interlocking is also designed for fail-safe operation.
A forced-oil cooling system - Available to keep brake performance as same as that of front/rear main operating winches.
Drum - One piece, parallel grooved lagging as same as that of front/rear main operating winches, except drum lagging width and flange diameter.
Drum lock - Electrically operated pawl.

## SLEWING:

Driven by a bi-directional, axial piston hydraulic motor through 2 -stage planetary reduction gear unit powering slewing pinion. Slewing pinion meshes with internal teeth of slewing (ring) gear of turntable bearing inner race.
Brakes - Spring-applied, power hydraulically released multiple wet-disc type; provided within hydraulic motor.
Slewing speed controller - Max. slewing speed can be tuned according to arbitrary value that is electrically controlled by dialing, and then varies pump discharge.
Lock - Mechanically operated drop pin.
Speed $-5.1 \mathrm{~min}^{-1}<5.1 \mathrm{rpm}>$.
GANTRY:
A-frame type; raised and lowered by power hydraulic cylinders.

## CENTRALIZED LUBRICATION SYSTEM

Provided as std. for A-frame and slewing circle.

## OPERATOR'S CAB:

A 2.3 mm thickeness steel plate construction with 940 mm wide and a stamped-androunded corner designs; acoustically treated, full-vision, cushion rubber mounted, wellventilated, full compartment, roomy operator's cab with a large straighted front window with green-tinted safety glass; provided with an arrangement of control station with universal joystick and armchair control levers, sunvisor, sunshade, rear-view mirrors, dual intermittent type window shield wipers with washer on
both front and roof windows, sliding windows on both sides of cab, and slewing-link type sliding door.
Instrument panel - Contains engine monitoring lamps, graphic display panel of Load Moment Indicator, gauges \& meter, warning lamps and other necessary controllers and switches.
Operator's seat - Full adjustable reclining seat with head rest and both R/H and L/H side arm rests.
Anemometer - Optional extra; available for both of liftcrane and fly jib attachment.
Air-conditioner - Built-in type full air-conditioner.
Electric cab fan - Optional extra; wind-direction adjustable type.
Engine foot throttle - Available for right-hand foot control, and links "EPC" controller electrically.
Electric outlet - 24 V ; available in cab.
Operator's cab side step - Available for access ease to operator's cab.
Gripping bar - Provided as std. for cab side step.
AM/FM radio - Provided as std. with clock.
Fire extinguisher - Optional extra; powder type.

## MACHINERY CAB:

Equipped with hinged doors on both sides for machinery access and inspection; affixed with tape-type non-skid material on the roof.

## CATWALKS:

Optional extra; hitched in place along both sides of machinery cab.

MACHINERY CAB RAILING: Optional extra;
HYDRAULIC TAGLINE:
Optional extra; available for clamshell application. Provided in front of upper revolving frame for preventing a shake of suspended load by a 10 mm dia. tug cable with light force.

## COUNTERWEIGHTS:

Weighs 28.2ton with a 3 -cast iron block, removable, corner-rounded design. Three blocks consist of "A" (9,200kg), "B" (9,100kg) and "C" (9,900kg).

## ELECTRICAL SYSTEM:

24-volt negative ground system; provided with two maintenance free batteries of $12 \mathrm{~V} \times 150 \mathrm{AH}$.

## LIGHTING SYSTEM:

Includes following lights.

- Two 70 W working lights;
- One 10 W interior cab light.

## REAR VIEW MIRRORS:

Two; provided on front-left and -right corners of super-structure.

SHAFTS AND PINS:
Most of shafts and pins used on superstructure are with zinc or nickel or chromiun plating for rustproof except A-frame gantry peak shaft.

## POWER UNIT:

| Make \& Model | Isuzu 6HK1X |
| :--- | :--- |
| Type | Water-cooled, 4-cycle, <br> direct injection, turbo- <br> charged, diesel |
| No. of Cylinders | Six (6) |
| Bore \& Stroke | $115 \mathrm{~mm} \times 125 \mathrm{~mm}$ |
| Displacement | $7,790 \mathrm{cc}$ |
| Rated Output | $212 \mathrm{~kW} / 2,000 \mathrm{~min}^{-1}$ <br> $\langle 288 \mathrm{ps} / 2,000 \mathrm{rpm}\rangle$ |
| Maximum Torque | $1125 \mathrm{Nm} / 1,500 \mathrm{~min}^{-1}$ <br> $\langle 115 \mathrm{kgf}-\mathrm{m} / 1,500 \mathrm{rpm}\rangle$ |
| Fuel Tank | 415 liters |

Note: 1. The engine meets Stage/Tier 3 of current smoke emission regulations in Europe, America and Japan.
2. A 212 kW engine horsepower shown above is defined under a current international engine horsepower indication formura which includes necessary horsepower for engine alternator drive but excludes engine fan drive.

## Undercarriage

## LOWER FRAME

All-welded, precision machined, box type construction; provided with longer axle with folding type tips reaching up to axle box end of crawler side frame for better fitting between axle and crawler side frames. A machined surface provided for mounting turntable bearing.

## LOWER FRAME JACK-UP DEVICE:

Optional extra; contains four hydraulic jack cylinders with cylinder beams pinned to lower frame for extending/retracting, and disassembling/assembling ease of crawler side frames.
Remote control box - Provided for controls of both lower frame jack and crawler side frame removal cylinders when opt. lower frame jackup device is required.
Pontoon - All-welded construction; four pontoons each storaged at an inside part of jack cylinder beams.

## CRAWLER SIDE FRAMES:

All-welded, box type construction, precision machined; positioned on lower frame axle beam, and held in place by plate links with pins.
Retract unit - Independently available on right-and left-hand crawler side frames for individually extending/retracting, and assisting in removing side frames. Controlled from operator's cab; if opt. lower frame jack-up device is provided, its controls is from remote control box as an accessory of the lower frame jack-up device.
Crawler side steps - Provided at both ends of the frames for easy access to superstructure.

## DRIVE SPROCKETS:

Cast steel, heat treated; one per side frame. Track drive sprocket assembly bolt-coupled to 3 -stage planetary reduction gear unit outer case as an integral part of shoe-in type traction motor. Sealed between parts of rotation and non-rotation of the motor with floating seal.

## IDLER WHEELS:

Cast steel, heat treated; one per side frame. Mounted on two bronze bushings with floating seals for lifetime lubrication.

## TRACK ROLLERS:

Twelve per side frame; each heat treated cast steel with double flange design. All mounted on two bronze bushings with floating seals for lifetime lubrication.

## CARRIER ROLLERS:

Two per side frame; each heat treated cast steel with double flange design. All mounted on two bronze bushings with floating seals for lifetime lubrication.

## TRACKS:

Tractor type; provided with inductionhardened, alloy, triple grouser shoes, and heat-treated track link pins with dirt seals; 60 pcs. per side frame.
Shoe width - 810 mm wide.
Track adjustment - Hydraulic track adjustment with shock-absorbing recoil spring is provided on each track.

## TRAVEL AND STEERING:

A bi-directional, shoe-in type axial piston hydraulic motor bolt-couples with drive sprocket thru 3-stage planetary reduction gear unit outer case at each crawler side frame end for travel and steer. Straight-line travel (forward or reverse), pivot or differential turns, and counter-rotation for spin turns available.
Brake - Spring-applied, power hydraulically released multiple wet-disc type automatic brake; located within hydraulic motor. Brakes automatically set when travel levers are in neutral or when engine is shut down.
Travel speed - Two stages; 1.7/1.2km/hr. (based on flat, level and firm supporting surface, and under the conditions that no load must be applied and front-end att. must be the 9.5 m basic boom only).
Gradeability - $30 \%\left(17^{\circ}\right)$ permissible based on basic machine without front-end attachment.

## LOAD MOMENT INDICATOR:

This is a fully computerized automatic overload preventing system including total safe operation control system; provided with the designs of (1) no zero-point adjustment, (2) data input according to interface counterindication/message on display panel, and (3) a graphic display panel with setting ease of viewing angle.
Construction (standard version) - Comprises (1) load detecting device with amplifier, (2) boom angle detector, (3) computerized Micro Processing Unit (M.P.U.), and (4) graphic display panel.
Functions - This system functions that if the lifting load reaches $90 \%$ of the rated one specified in the crane capacity chart, an intermittent pre-warning buzzer is given; if it is $100 \%$, a warning is given by a continuous buzzer, and all peril side motions are automatically stopped. The machine, however, can be operated in safety side motions.
Display panel design - A graphic display panel is designed, and it is able to input necessary operating conditions/data according to interface counter-indication/message on the display panel, and the display panel indicates ten and some kinds of the present lifting and working conditions/data like "lifting load", "max. allowable lifting load", "working radius", "max. allowable working radius", "boom angle", "load ratio", "boom/jib lengths", "engine rpm" and so on when working. In addition, the display panel is provided with three warning indicators over "engine over-heat", "hyd. oil over-temp." and "brake oil over-temp.".

## DRUM ROPE OVER-PAYOUT LIMITER:

Optional extra; Available on both front and rear main drums, and functions to automatically stop drum ratation when no. rope winding at 1 st layer becomes three(3).

## MAIN HOOK OVER-HOISTING LIMITER:

Limit switch type. Available to prevent hook over-hoisting with functions of automatic drum braking with hydraulic lock, and warning by buzzer.

## BOOM OVER-HOISTING AND -LOWERING LIMITER:

Available in two kinds of devices; one is limit switch located on a part of boom foot for preventing boom over-hoisting, and the other is the safety function of the LMI available to automatically prevent boom over-hoisting andlowering with the functions of automatic drum braking with hydraulic lock, and warning by buzzer. Further boom protection from rapid boom over-hoist by hook over-hoist motion under mal-function of main hook over-hoisting limiter is available as one of functions of the LMI.

## BOOM BACKSTOPS:

Dual; telescopic design with spring buffers.

## SECONDARY BOOM OVER-HOISTING LIMITER:

Additional limit switch located on boom backstops; this is as a further safety device for redundant boom protection.

## SLEW LOCK

Mechanically operated drop pin; available to firmly lock superstructure in four positions of facing front or rear or left or right to undercarriage.

## DRUM LOCKS

Electrically operated pawl locks is available on
front and rear main drums while power hydraulically operated pawl lock is available on boom hoist drum with an automatic locking device as std.
THIRD DRUM LOCK:
Provided as std. when an optional 3rd drum winch is provided
FREE-FALL INTERLOCKING:
Available on both front and rear main drum brake lines for fail-safe operation. Functions that free-fall brake mode is only available when drum brake pedal is pressed even though brake mode is switched on free-fall mode.
ENGINE START INTERLOCK SYSTEM:
Available not to start engine whenever drum brake mode is in "free-fall".
SLEWING BRAKE SAFETY CIRCUIT:
Available not to start engine whenever slewing brake is off
BOOM ANGLE INDICATOR:
Pendulum type; mounted on right-hand side of base section of crane main boom
HOOK LATCH
Provided on every kinds of hook to prevent out of place of cable from hook.
LEVEL GAUGE:
Bubble type; located on operator's cab floor of superstructure.
CONTROL LEVER LOCKS:
Provided on two armchair control levers for travel to lock levers in neutral.
SLEWING ALARM:
This is by buzzer, and flasher lamps located on both sides of machinery cab.

## TRAVEL ALARM:

Available by an intermittent buzzer.
SPEED SLOWDOWN DEVICE:
This is for speed slowdown of hoisting and lowering motions of boom which are available just before automatic stopping at both upper and lower side limits of boom angle even though control lever(s) is still at hoisting/lowering position to prevent a shock.
SIGNAL HORN:
Available as warning just before every kinds of motions are initiated.
LOCK LEVER (FOOL PROOF SHUT-OFF LEVER):
Located in the cab exit; this is available to automatically deactivate and lock hydraulic system.
FRONT-END ATT. ERECTION MODE:
This is an internal, integral function of the LMI. In the range out of crane working area, the LMI display panel automatically indicates "Now, out of crane working range" with a rigging instruction, and it is available to lift front-end att. off ground without the influence of LMI safety
functions, and, after front-end att. is lifted over the range of crane working area, LMI safety fuction gets back automatically for safe erection work. This function is also available for the work of vice-versa.

## LMI SAFETY CIRCUIT-OFF SWITCH:

Available in key type for a good crane safety operation management without fail.

## TRAVEL DIRECTION ARROW:

Attached each on crawler side frames.

## GAUGES \& METER:

Engine water temperature gauge, fuel gauge and hour-meter are provided on instrument panel.

## WARNING LAMPS

Available to let operator warn abnormal machine conditions as to pilot pressure and brake system of two main and opt. 3rd drums.; provided on instrument panel.

## ENGINE MONITORING LAMPS:

Available to let operator warn engine abnormal conditions as to battery charge, lubrication oil pressure, radiator coolant level, air filter clogging, water temp., contorol unit and glow plug.; provided on instrument panel.
EMERGENCY ENGINE STOP SWITCH:
Located at cab instrument panel, and available to stop engine whenever it is necessary.

## THREE COLOR PERCENTAGE INDICATOR:

Optional extra; this is with three colors of Green, Yellow and Red. Each color indicates the load percentage to rated capacity; Green shows less than $90 \%$ as safety, Yellow shows 90 to $99 \%$ as marginal, and Red shows over $100 \%$ as over-loading. As further function, Red lamp comes on automatically when operator cuts off safety circuit of the LMI absentmindedly.
LIFTING HEIGHT INDICATION DEVICE:
Available to indicate lifting height above ground or depth below ground on display panel of the LMI. Also, hook hoisting speed slowdown function is available just before automatic stopping at a desired height under hook height setting before operation.

## MICROPHONE \& LOUD-SPEAKER

Optional extra; this is for operator's convenience for loud speaking.

## DRUM LIGHT \& MIRROR

Optional extra; these are available for checking rope winding onto front and/or rear drum(s).

## AUX. HOOK OVER-HOISTING LIMITER:

Optional extra; this is available for auxiliary crane hoist with optional short jib and/or fly jib. Performs the same function as that of "Main hook over-hoisting limiter" mentioned before.
ANEMOMETER:
Optional extra; analogue type. Indicates wind velocity and alarms when the velocity exceeds a figure set.

## Front-end Attachment

|  |
| :---: |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

## FLY JIB:

Optional extra; lattice construction, round tubular main chords, alloy, hi-ten steel, with bracing of round steel tubing having in-line pin connections at 0.51 m deep and 0.54 m wide, and jib head machinery with single sheave mounted on antifriction bearings of conventional, non sealed-grease type. Provided with jib strut, jib backstops, and jib/boom guyline pendants. Mounted on 4.0 m tapered crane top section, and available for light load lifting operation with less than 11ton with single part hoist line.

## SHORT JIB:

Optional extra; all-welded construction having single sheave head machinery. Pinned to 4.0 m tapered crane top section. Available for 11ton lift as maximum with single part hoist line.

## HOOK BLOCKS:

Sheaves all mounded on anti-friction bearings. Available in 4 kinds of capacities as under:
80t, four sheaves $\qquad$ Optional extra.
50t, two sheaves Optional extra.
30 t , one sheave Optional extra
11t, ball hook Optional extra.

## BAIL AND BRIDLE:

All-welded construction; provided with larger sheaves of a $21.0 \mathrm{D} / \mathrm{d}$ ratio on both bail and bridle for 12-part boom hoist rope reeving. Bail pinned to A-frame gantry, and bridle suspended between a 12-part boom hoist rope and pendant ropes connecting to tip of 4.0 m tapered crane top section. Sheave all mounted on anti-friction bearings of conventional, non sealed-grease type.

DRUM DATA:

| Drum | Root dia. | Type | Line speed <br> (Hoisting, Lowering) | Cable | Max. <br> line pull |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Front <br> (main crane hoist) <br> (clamshell bucket holding) <br> (hammer grab crown holding via hook) | 554 mm | Parallel grooved | $110 \sim 2 \mathrm{mpm}$ | 26.0 mm | 196 kN <br> $\langle 20 \mathrm{t}\rangle$ |
| Rear <br> (aux. crane hoist) <br> (clamshell bucket closing) <br> (hammer grab holding \& closing) | 554 mm | Parallel grooved | $110 \sim 2 \mathrm{mpm}$ | 26.0 mm | 196 kN <br> $\langle 20 \mathrm{t}\rangle$ |
| Boom hoist |  |  |  |  | (16mm |
| Optional 3rd | 450 mm | Parallel grooved | $68 \sim 2 \mathrm{mpm}$ | 104 kN <br> $\langle 10.6 \mathrm{t}\rangle$ |  |

## Notes:

1. Line speed is based on drum first layer and rated engine rpm.
2. Hoisting line speed varies under load and operating conditions.

## HOIST REEVING:

| Kind of <br> hook block | No. of <br> partine | 8 | 7 | 6 | 5 | 4 | 3 | 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 80 t | 80.0 | 77.0 | 66.0 | 55.0 | 44.0 | - | - | - |
| 50 t | - | - | - | 50.0 | 44.0 |  | - | - |
| 30 t | - | - | - | - | - | 30.0 | 22.0 | - |
| 11 t | - | - | - | - | - | - | - | 11.0 |

## CABLES:

Front drum $3 \times F(40)$, 26 mm dia./175m long, breaking load 569 kN 〈 58.0 t$\rangle$.
Rear drum Optional extra; $3 \times F(40)$, 26.0 mm dia./150m long, breaking load 569 kN〈 58.0t $\rangle$.
Boom hoist drum
IWRC $6 \times P$ W $W$ (31), 16 mm dia./150m long, breaking load $219 \mathrm{kN}\langle 22.3 \mathrm{t}\rangle$.
Optional 3rd drum
Optional extra; EP $3 \times F(40)$, 22.4 mm dia., breaking load $429 \mathrm{kN}\langle 43.7 \mathrm{t}\rangle$. Length deperds on request.

## ■LIFTCRANE CAPACITIES:

| $\begin{array}{\|c\|} \hline \text { Boom length }(\mathrm{m}) \\ \text { Working Radius }(\mathrm{m}) \\ \hline \end{array}$ | 9.5 | 12.5 | 15.5 | 18.5 | 21.5 | 24.5 | 27.5 | 30.5 | 33.5 | 36.5 | 39.5 | 42.5 | 45.5 | 48.5 | 51.5 | 54.5 |

## ■WORKING MASS \& GROUND CONTACT PRESSURE:

| Shoe width | Mass | Pressure |
| :---: | :---: | :---: |
| 810 mm | 77.5 t | $92.0 \mathrm{kPa}<0.94 \mathrm{~kg} / \mathrm{cm}^{2}>$ |

Note: Working mass shown above is with 9.5 m basic boom, 28.2ton counterweight, 1.5 ton sub weight and optional 80t hook block.

## Notes - Liftcrane capacities

1. Capacities included in this chart are the maximum allowable, and are based on machine standing level on firm supporting surface under ideal job conditions.
2. Capacities are in metric tons, and are rated in accordance with EN13000 Standard.
3. Capacities are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, and operating speeds. Operator must reduce load ratings to take such conditions into account. Deduction from rated capacities must be made for mass of hook block, weighted ball/hook, sling, spreader bar, or other suspended gear.
Hook block mass is as follows:

| 80t...........1.05ton | 50t …......0.90ton | 30t $\cdot \cdots \cdots \cdots \cdot 0.73$ ton |
| :---: | :---: | :---: |

11.............0.37ton
4. All capacities are rated for $360^{\circ}$ slewing.
5. Least stable rated condition is over the side.
6. A 28.2 ton counterweight and 1.5 ton sub weight (or opt. 3rd drum) are required for all capacities on this chart.
7. Crawler side frame must be fully extended for all operating conditions.
8. Attachment must be erected and lowered over the ends of the crawler mounting.
9. Main boom length must not exceed 54.5 m .

Maximum fly jib length permitted - 18.0 m .
Maximum boom and fly jib combination length permitted $42.5 \mathrm{~m}+18.0 \mathrm{~m}$ or $45.5 \mathrm{~m}+9.0 \mathrm{~m}$.
Maximum boom length when mounting short jib is 48.5 m .
10. Capacities when handling load off main boom head sheaves in case of mounting fly jib or short jib on top of boom are detailed; if required, please consult us or nearest distributor.

## SCX800HD-2 SHORT JIB CAPACITIES: Max. 11t

Note: Jib capacities are almost equal to the figures made by the deduction of a 300 kg from the liftcrane capacities for boom length up to 48.5 m unless restricted by the maximum jib capacity shown above. As to the details, please consult us or nearest distributor.

Short jib (Option)

## Fly J ib Capacities - en Rating

## Notes - Fly jib capacities

1. Capacities included in these charts are the maximum allowable, and are based on machine standing level on firm supporting surface under ideal job conditions.
2. Capacities are in metric tons, and are rated in accordance with EN13000 Standard.
3. Capacities are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, and operating speeds. Operator must reduce load ratings to take such conditions into account. Deduction from rated jib capacities must be made for weight of hook block, weighted ball/hook, sling, spreader bar, or other suspended gear.
Hook block weight is as follows;
11t............0.0.37ton
4. All capacities are rated for $360^{\circ}$ slewing
5. Least stable rated position is over the side.
6. A 28.2ton counterweight and 1.5ton sub.weight (or opt.3rd drum) are required for all capacities on these charts.
7. Crawler side frame must be fully extended for all operating conditions.
8. Attachment must be erected and lowered over the ends of the crawler mounting.
9. Maximum fly jib length permitted is 18.0 m , and maximum boom and fly jib combination length permitted is 42.5 m boom plus 18.0 m fly jib or 45.5 m boom plus 9.0 m fly jib.

## Liftcrane Working Ranges

## ■CLAMSHELL RATINGS:

| Boom length (m) <br> Working radius (m) | 9.5 | 12.5 | 15.5 | 18.5 | 21.5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 5.9 | 10.00 |  |  |  |  |
| 6.0 | 10.00 |  |  |  |  |
| 7.0 | 10.00 | 10.00/7.10 |  |  |  |
| 8.0 | 10.00 | 10.00 | 10.00/8.30 |  |  |
| 9.0 | 10.00 | 10.00 | 10.00 | 10.00/9.60 |  |
| 10.0 | 10.00/9.1 | 10.00 | 10.00 | 10.00 | 10.00/11.00 |
| 12.0 |  | 10.00 | 10.00 | 10.00 | 10.00 |
| 14.0 |  | 10.00/11.80 | 10.00 | 10.00 | 10.00 |
| 16.0 |  |  | 10.00/14.30 | 10.00 | 10.00 |
| 18.0 |  |  |  | 10.00/16.70 | 9.45 |
| 19.2 |  |  |  |  | 8.65 |

## Notes:

1. Max. clamshell rating is 10.0 t .
2. Mass of bucket plus load should not exceed clamshell ratings shown above. Following data are for a general digging application buckets.

| Bucket capacity | $2.0 \mathrm{~m}^{3}$ | $2.5 \mathrm{~m}^{3}$ |
| :--- | :---: | :---: |
| Bucket mass | 4.5 t | 5.5 t |

3. Boom length shall not exceed 21.5 m .
4. Apparent specific gravity of lifting material:
Earth $\qquad$ -1.7~1.8t/m ${ }^{3}$
Gravel $\qquad$ 1.8~2.0t/m³
5. High gantry is required and side frame must be fully extended for all operating conditions. Also, 28.2 t counterweight and 1.5 ton sub weight (or opt. 3rd drum) are required for all clamshell ratings shown above.
6. Max. digging depth below ground shall be 36 m .

## -WORKING MASS \& GROUND CONTACT PRESSURE:

| Shoe width | Mass | Pressure |
| :---: | :---: | :---: |
| 810 mm | 82.2 t | $97.5 \mathrm{kPa}<1.00 \mathrm{~kg} / \mathrm{cm}^{2}>$ |

Note: Working mass shown above is with 9.5 m boom, 28.2 ton counterweight, 1.5 ton sub weight, hydraulic tagline and $2.5 \mathrm{~m}^{3} / 5.5$ t clamshell bucket.

■BUCKET DIMENSIONS:

| (in m) |  |  |  |
| :--- | :--- | :---: | :---: |
|  | $2.0 \mathrm{~m}^{3}$ | $2.5 \mathrm{~m}^{3}$ |  |
| A | Bucket overall height (opened) | 4.59 | 5.13 |
| B | Bucket overall height (closed) | 3.78 | 4.18 |
| C | Bucket opening width | 3.24 | 3.63 |

## Notes:

1. Buckets of $2.0 / 2.5 \mathrm{~m}^{3}$ are for a general excavating purpose.
2. Other type of bucket than above is also available.

## General Dimensions

Dimensions in〔〕 are when tracks are fully retructed.
(in mm)

Notes:1. The above general arrangement is under liftcrane application with 9.5 m basic boom and optional 80 t hook block.
2. Radius of rear end of the counterweight is $3,980 \mathrm{~mm}$.

## Boom \& Fly J ib Combination Diagram

## ■Crane Boom Combination

Notes : The meanings of figures and symbols shown above are as follows:.
<55 : 5.5m base section
4 C : 4.0 m tapered top section

3 : 3.0m boom extension
6 : 6.0m boom extension
9 :9.0m boom extension
$9(B): 9.0 \mathrm{~m}$ boom extension (for use with fly jib)

## ■Short jib is able to attach on boom ranging from 9.5 m thru 48.5 m in length:

■Fly Jib Combination (Available offset angle : 10 \& 30 degrees):

| Jib <br> Length <br> $(\mathrm{m})$ | Jib Combination |  |  |  |
| :---: | :--- | :--- | :--- | :---: |
| 9.0 |  |  |  |  |
| 13.5 | 4.54 .5 |  |  |  |
| 18.0 | 4.5 | 4.5 | 4.5 |  |

Note : The meanings of figures and symbols shown above are as follows:.
$4.5: 4.5 \mathrm{~m}$ base section $\qquad$ : 4.5m jib extension
$4.5 \quad: 4.5 \mathrm{~m}$ top section

■Boom Plus Fly Jib Combination Table (Available offset angle : 10 \& 30 degrees):

| Boom Length (m) |  | 9.5 | 12.5 | 15.5 | 18.5 | 21.5 | 24.5 | 27.5 | 30.5 | 33.5 | 36.5 | 39.5 | 42.5 | 45.5 | 48.5 | 51.5 | 54.5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\widehat{E}$ | 9.0 | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\times$ | $\times$ | $\times$ |
| $\stackrel{\square}{\square}$ | 13.5 | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\times$ | $\times$ | $\times$ | $\times$ |
| 윽 | 18.0 | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\times$ | $\times$ | $\times$ | $\times$ |

Note : In case that fly jib is attached, kind of boom extension should be $9 \mathrm{~m}(\mathrm{~B})$.
(O:possible $\times$ :impossible)

## Transport Data

Description

| General Arrangement |
| :--- |
| Base machine with front |
| drum wire rope, boom |
| derricking drum wire rope, |
| crawlers, bridle and sub |
| weight |

Base machine with crane
exclusive boom base,
rront drum wire rope,
crawlers, bridle and sub
weight;

| Description | Qty | Dimension | Mass(kg) | Description | Qty | Dimension | Mass(kg) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Jib Top section | 1 |  | 270 | 30t Hook Block | 1 |  | 730 |
| 4.5m Jib Extension | 1 |  | 140 | 11t Ball Hook | 1 |  | 370 |

|  | Standard equipment | Optional equipment |
| :---: | :---: | :---: |
| Superstructure | - Isuzu 6HK1X diesel engine with an 212kW <288ps> rated output; <br> - Hydraulic system with three variable displacement axial piston pumps and one fixed displacement duplicate tandem gear pump; provided with aluminum-make oil cooler; <br> - Control system with one set each of quadruplicate and triplicate tandem valves and pilot-operated universal joystick and arm chair single axis control levers; provided with "EPC" controller (easy-precise-minute engine rpm and hyd. pump oil flow control device), and specially-tailored pressure compensating valves; <br> - Front and rear main operating drum winches of 196 kN 〈 20 t 〉 line pull with 554 mm dia. drum lagging driven by independent variable displacement hyd. motor; provided with multiple wet-disc type brake installed within drum inside together with reduction gear unit with negative brake design, brake release control under dynamic hyd. pressure, and a forced-oil cooling system. Available to operate in two brake modes of automatic and free-fall; <br> - Boom hoist mechanism driven by hyd. motor with automatic brake; provided with multiple wetdisk type automatic brakel; <br> - Drum rotaition speed controller (for boom hoisting mechanism); <br> - Slewing speed controller; <br> - Slewing mechanism with turntable bearing; driven by one hyd. motor w/spring-applied, power hydraulically released multiple wet-disc brake; provided with speed control device; <br> - Power hydraulically retractable A-frame cylinder; - 940 mm wide, full-vision operator's cab with a stamped-and-rounded corner design and large front window; provided with an arrangement of joystick plus armchair operator control station and instrument panel; <br> - 28.2ton counterweight; <br> - 1.5 ton sub weight; <br> - Machinery cab with hinged doors; <br> - 24-volt electrical system with two 12-volt batteries; <br> - Lighting system; <br> - Two working lights; <br> - One interior cab light; <br> - Rear view mirrors; <br> - Accessories: <br> - AM/FM radio w/clock; <br> - Engine hourmeter; <br> - Engine tachometer;indicated on display panel of LMI; <br> - Fuel gauge; <br> - Eng. water temp. gauge; <br> - Engine over-heat indicator; available on display panel of LMI; <br> -Hyd. oil over-temp. indicator; available on display panel of LMI; <br> - Brake oil over-temp. indicator; available on display panel of LMI; <br> - 24 V electric outlet; <br> - Dual, intermittent window shield wipers with washers; available on both front and roof windows; <br> - Cigar lighter; <br> - Ashtray; <br> - Sunvisor; <br> - Sunshade; <br> - Cup holder; <br> - Non-skid surfaces; <br> - Cab floor mat; <br> - Engine foot throttle; <br> - Built in type full air-conditioner; <br> - Cab front step; <br> - Cab side step; <br> - Gripping bar (for cab side step); <br> - Superstructure under-cover. <br> - Centralized lubrication system (for A-frame and slewing circle). | - Drum rollers; available on front/rear main drums; <br> - Catwalks along both sides of machinery cab; <br> - Machinery cab railing; <br> - Third hoisting mechanism; <br> - Counterweight self-removal device; <br> - Re-fuel pump; <br> - Microphone \& loud speaker; <br> - Fire extinguisher; <br> - Electric cab fan; <br> - Drum light \& mirror; <br> - Hyd. tagline; available for clamshell application (with wire rope; $10 \mathrm{~mm} \times 45 \mathrm{~m}$ ); <br> - Reeving winch; <br> - Hyd tagline with reeving winch; <br> - Add fuel filter; <br> - Add air cleaner element; <br> - Removable company nameplate; available on both sides of machinery cab. |

|  | Standard equipment | Optional equipment |
| :---: | :---: | :---: |
| Undercarriage | $\bullet 4,830 \mathrm{~mm}$ gauge by $6,275 \mathrm{~mm}$ long crawler lower with power hydraulically retractable/ extendible crawler side frames; <br> - Crawler drive units with shoe-in type traction motor with wet-disc type automatic brakes; <br> - Tractor type tracks with 810 mm wide 3 -bar grouser shoes; <br> - Hydraulic track adjusting devices with recoil spring; <br> - Lifetime lubricated track components; <br> - Crawler side steps. | - Lower frame jack-up unit w/4-vertical hyd. <br> jack-up cylinder and remote control unit; <br> - Crawler side frame lifting wire. |
| Liftcrane Att. | $\bullet 9.5 \mathrm{~m}$ basic boom; 5.5 m base section, and 4.0 m tapered top section; <br> - Four boom head sheaves w/two guide sheaves and rigid type cable guard; <br> - Bail and bridle assemblies; <br> - Main crane hoist cable; 26.0 mm dia. $/ 175 \mathrm{~m}$ long; <br> - Boom hoist cable; 16 mm dia./150m long. | - 3.0 m boom extension; <br> - 6.0 m boom extension; <br> - 9.0 m boom extension; <br> - 9.0 m basic fly jib; 4.5 m bottom and top sections with strut and guyline pendants; <br> - 4.5m fly jib extension; <br> - Short jib; <br> - 80t hook block; <br> - 50t hook block; <br> - 30t hook block; <br> - 11t ball hook; <br> - Aux. crane hoist cable, 26.0 mm dia./150m long; <br> - Boom skywalk; available for all sections of liftcrane main boom. <br> - Buffer; <br> - Openable rigid guard; <br> - Open/close and suspend cable. |
| Safety Devices | - Load Moment Indicator; this is a computerized automatic over-load preventing system incl. total safe operation control system; provided with a graphic display panel indicating ten and some kinds of present lifting conditions; <br> - Lock lever (Fool proof shut-off lever); <br> - Emergency engine stop switch; <br> - Engine start interlock system; <br> - Non-drum brake preventing device; <br> - Free-fall interlocking; <br> - Speed slowdown device; <br> - Before-work check moniter; <br> - Boom over hoisting and lowering limiter; <br> - Main hook over hoisting limiter; <br> - Secondary boom over hoisting limiter; <br> - Slewing alarm; <br> - Travel alarm; <br> - Slew lock; <br> - Independent lever lock; <br> - Main and aux. drum pawl locks; <br> - Automatic drum lock; boom hoist drum; <br> - Lifting height indication device; <br> - Boom angle indicator; <br> - Level gauge; fitted on floor of operator's cab; <br> - Warning lamps; available for pilot line and brake system; <br> - Engine monitoring lamps; <br> - Slewing brake safety circuit; <br> - Signal horn; <br> - Hook latch; <br> - Travel direction arrow; <br> - Front-end att. erection mode; <br> - LMI safety circuit-off switch. | - Three color percentage indicator; <br> - LMI mode select switch; <br> - Anemometer; <br> - Cabin roof window guard; <br> - Aux hook over-hoisting limter; <br> - Open/close and suspend cable disengagement limiter; <br> - Drum rope over-payout limiter; <br> - Emergency escape hammer. |
